

# PROJECT CONTEXT — SamInnova

## Portfolio

This file explains WHO the site is for and WHAT must stay true. Read this before writing any content or code.

---

### Who this is for

**Name:** Alpha Moussa Sow

**Professional/independent activity name:** SamInnova (never "WebWizard" — that's an outdated old name, do not use it)

**Status:** Completed Licence 3 in MIAE (Méthodes Informatiques Appliquées à la Gestion des Entreprises) in 2026, at Université Kofi Annan de Guinée (2023–2026). Now transitioning from student to professional — targeting internships, junior dev roles, and freelance/client work.

**Positioning line:** "MIAE Web & Information Systems Developer"

**Supporting line:** "Building practical digital solutions through web development and information systems."

**Narrative arc the site should tell:** Student → practical builder → independent developer → emerging professional. NOT "student with only academic assignments."

**Two audiences at once:**

1. Recruiters / companies hiring interns or junior devs
  2. Potential freelance/business clients
- 

## **Real, confirmed projects (the only ones allowed in the Projects section)**

| Project           | Type                                      | Status                            |
|-------------------|-------------------------------------------|-----------------------------------|
| Amogemio          | Website                                   | Almost finished / near completion |
| Brasserie Artemis | Business/brewery website                  | Real, completed                   |
| SamiSpa           | Booking/reservation system                | Real, completed                   |
| Digital Menus     | Digital menu solutions for restaurants    | Real, completed                   |
| Gestion_Immo      | Django/Python real-estate rental platform | Real, academic/practical project  |

**Do NOT treat as portfolio projects:** old CV entries like "Plateforme Immobilière & Réservation," "Application de Gestion de Plannings," "Plateforme E-Learning Intégrée" — these are outdated CV filler, not confirmed real work.

## Projects that must NEVER be shown as completed

- **University Games / Jeux Universitaires** — a planned platform for university games info in Guinea. Concept stage only.
- **Yame** — a local dating app concept. Concept stage only.

These can only appear in a clearly separate "Upcoming / Currently Building" section, never mixed with finished work, and only if explicitly requested.

---

## Contact info (real, verified — use only this)

- Location: Conakry, Guinée
  - Email: 22nysam@gmail.com
  - Phone: +224 612522199
- 

## Technical profile (for the Skills section)

**Core:** HTML, CSS, JavaScript, Bootstrap, PHP, SQL, MySQL, Python

**Frameworks:** Django, Laravel

**Tools/deployment:** Git/GitHub, VS Code, Netlify, AlwaysData, FileZilla, WinSCP, AI-assisted dev tools

Do not portray every technology as expert-level. Distinguish used-in-real-projects vs. studied/exploring. AI-assisted development is fine to acknowledge as part of his workflow — not a replacement for understanding the code.

---

## **Hard content rules (non-negotiable)**

Never invent: projects, clients, employers, awards, certifications, GitHub repos, results/metrics, user counts, revenue, technologies not actually used, testimonials, or "expert" claims without evidence. Never present an unfinished project as complete.

**If real project info (screenshots, links, descriptions) isn't available yet:** use clearly generic placeholder copy like "Description coming soon" / "Description à venir" — never fabricate specifics even as a placeholder.

If information is missing, ask for it or leave it out. When real project details eventually get added, they should come from inspecting the actual site/repo, not from memory or assumption.
